Future Nobel Prize

November 14, 2018

We will use the Annual Survey of Manufactures (Bureau of the Census, (release year)) to do something.

1 Details

This sample L^AT_EX document uses `biblatex` to pull down the `cms.bib` file. The key code is

```
\usepackage[style=apa,backend=biber]{biblatex}  
\addbibresource{https://raw.githubusercontent.com/ncrncornell/  
  cms-to-bib/master/cms.bib}
```

This will download the file from a website.

2 Caveats

2.1 Might not work on Overleaf

There are reports that this code will not work on Overleaf, due to the remote-file download functionality. The workaround is to use the URL-upload facility on Overleaf to add the `cms.bib` to the Overleaf folder, and change the `addbibresource` line to read

```
\addbibresource{cms.bib}
```

2.2 Year reported says "release year"

The supplied bib file is just an example. In practice, it needs to be adapted either by the agency providing it or by the researcher using it.
